This interesting table published for the first time shows the ages of the parents in respect to births.

It will be noted that there were more mothers at 25 years of age than at any other one age, while the commonest age for fathers was 30 years.

Where illegitimacy is in question the largest number of mothers were 19 years of age.

The youngest mother was 13 years; the oldest over 55 years of age. The youngest fathers were 16, and the oldest over 70.

## ILLEGITIMATE BIRTHS.

There were registered 1,592 illegitimate births, which is a rate of 21.5 per 1,000 living births. This is 1.0 higher than for 1920. As usual, the city municipalities contributed the largest number, 1,052 or 66.1% of the whole being for the cities, a rate of 32.6 per 1,000 living births. The high rate which is invariably found in city municipalities does not reflect the true status of the morals of city dwellers, and while it is probably true that a higher rate would show in urban centres, the abnormally high rate is due in a large measure to hospitalization, and the fact that women come or are sent to urban centres from rural parts of the Province for their confinement.

## MULTIPLE BIRTHS.

There were 784 pairs of twins born during the year, which is the largest number on record. Of these 813 were boys, and 755 girls. Of triplets there were one dozen sets or 36 children, being 25 boys and 11 girls.

## MARRIAGES.

There were 24,871 marriages registered during the year, this being a rate of 8.5 marriages for every 1,000 of the population. This was a numerical decrease of 4,233 and a decrease of 1.5 in the rate. The falling off was likely due to the economic conditions of the country. The general commercial depression resulted in a large number of persons being out of employment during the year; this had the usual effect of lowering the marriage rate.

The following table gives a comparison between the years 1920 and 1921:

## DEATHS.

There was a total of 34,551 deaths registered during the year. This is a rate of 11.8 per 1,000 of population and is the lowest rate since 1898, when it was 11.5.

The following table shows a comparison with the previous year:

| | 1921 | Ratio | 1920 | Ratio |
|---|---|---|---|---|
| Entire Province | 34,551 | 11.8 | 40,440 | 13.9 |
| Cities | 14,907 | 12.8 | 17,473 | 15.0 |
| Towns | 2,273 | 14.5 | 3,049 | 18.1 |
| Rural | 17,371 | 10.8 | 12,918 | 12.7 |

There was a numerical decrease of 5,889, and a decrease of 2.1 in the rate. There were 18,062 male and 16,489 female deaths.

It may be noted that whereas in 1920 the cities contributed considerable more deaths than the rural parts of the province, the situation was reversed in 1921.

The following table shows the ten highest causes of death for a decade.

It will be noted in respect to tuberculosis that the cities have the lowest mortality rate. The reason for this is the fact that public health work is more advanced in the cities than in the towns and rural areas, and its good effect in respect to this disease is apparent.

The increase in cancer is a serious one and as remarked in former reports, the chief means of combating this increase is by the education of the public in knowledge which will lead to early recognition of the disease in order that treatment may be applied when it will have the best chance of success. The Provincial Board of Health and other agencies have spread, through pamphlets, newspaper articles and exhibits, a great deal of useful information on this and other public health topics.

## INFANT MORTALITY.

The number of children who died before completing twelve months of age was 6,763, which is a rate of 91.3 per 1,000 living births and is the lowest rate ever recorded in the province.

In Table 13 will be found deaths under one year of age by city, town and rural municipalities.

The following table shows the Infant Mortality rate for a decade:

It may be noted that it is somewhat more elaborate than the former list, and while maintaining the same general classification it has made each class more comprehensive.
